

Peat for demanding gardeners!

TRANSPORT LOGISTICS FOR INTERNATIONAL CLIENTS AT LAFLORA PEAT FACTORY

In October 2024, Laflora commenced the construction of a wind farm and the development of a green industrial area on its Kaigu bog property, adjacent to Laflora peat product factory.

From now until 2026, adjustments will be in place regarding transport arrangements for international clients visiting the site to collect peat product orders.

- 108.8 MW wind farm capacity
- 16 Nordex wind turbines
- 350 GWh of produced electricity
- The wind farm's energy production will drive the development of the green industrial area, allowing Laflora to offset greenhouse gas emissions from peat extraction and processing, in line with the company's climate neutrality strategy

When entering the territory of Laflora with transport for loading peat products, drivers must follow the instructions of Laflora employees and strictly adhere to the internal regulations!
